

WHAT IS CLAIMED IS:

Sub.
Cl. 1. A portable type information processing apparatus adapted to exchange information with another information processing apparatus, comprising:

capture means for capturing information;

memory means for storing information captured via said capture means;

acquisition means for acquiring information associated with the information stored in said memory means on the basis of the information stored in said memory means; and

display means for displaying the information acquired via said acquisition means.

2. A portable type information processing apparatus according to Claim 1, wherein said acquisition means comprises:

transmission means for transmitting the information stored in said memory means to said another information processing apparatus; and

reception means for receiving the associated information from said another information processing apparatus.

09126007-072998

3. A portable type information processing apparatus according to Claim 1, wherein said acquisition means includes storage means for storing the acquired information.

4. A method of processing information with a portable type information processing apparatus adapted to exchange information with another information processing apparatus, said method comprising the steps of:

capturing information;
storing the information captured in said capture step;
acquiring associated information on the basis of the information stored in said storage step; and
displaying the information acquired in said acquisition step.

5. A transmission medium for transmitting a program to a portable type information processing apparatus adapted to exchange information with another information processing apparatus, said program comprising the steps of:

capturing information;
storing the information captured in said capture step;

09126007-072998

acquiring associated information on the basis of the information stored in said storage step; and displaying the information acquired in said acquisition step.

6. An information processing apparatus adapted to exchange information with a portable type information processing apparatus, comprising:

reception means for receiving information from said portable type information processing apparatus;

judgement means for judging whether the information received via said reception means includes an identification code in a predetermined form associated with the information; and

transmission means for transmitting information associated with the information indicated by said identification code to said portable type information processing apparatus, depending on the judgement result made by said judgement means.

7. A method of processing information with an information processing apparatus adapted to exchange information with a portable type information processing apparatus, said method comprising the steps of:

receiving information from said portable type

09126007.072998

information processing apparatus;

judging whether the information received in said reception step includes an identification code in a predetermined form associated with the information; and

transmitting information associated with the information indicated by said identification code to said portable type information processing apparatus, depending on the judgement result made in said judgement step.

8. A transmission medium for transmitting a program to an information processing apparatus adapted to exchange information with a portable type information processing apparatus, said program comprising the steps of:

receiving information from said portable type information processing apparatus;

judging whether the information received in said reception step includes an identification code in a predetermined form associated with the information; and

transmitting information associated with the information indicated by said identification code to said portable type information processing apparatus, depending on the judgement result made in said judgement step.

9. An information processing system including a first portable type information processing apparatus and a

09126007.072998

Sub.
G2

second information apparatus adapted to exchange information with said first information processing apparatus, wherein

said first information processing apparatus comprises:

capture means for capturing information;

memory means for storing information captured via said capture means;

acquisition means for acquiring information associated with the information stored in said memory means on the basis of the information stored in said memory means; and

display means for displaying the information acquired via said acquisition means; and

said second information processing apparatus comprises:

reception means for receiving information from said first information processing apparatus;

judgement means for judging whether the information received via said reception means includes an identification code in a predetermined form associated with the information; and

transmission means for transmitting information associated with the information indicated by said identification code to said first information processing

00126000 072998

apparatus, depending on the judgement result made by said judgement means.

10. A method of processing information in an information processing system including a first portable type information processing apparatus and a second information apparatus adapted to exchange information with said first information processing apparatus, wherein

said first information processing apparatus performs a process comprising the steps of:

capturing information;

storing the information captured in said capture step;

acquiring associated information on the basis of the information stored in said storage step; and

displaying the information acquired in said acquisition step; and

said second information processing apparatus performs a process comprising the steps of:

receiving information from said first information processing apparatus;

judging whether the information received in said reception step includes an identification code in a predetermined form associated with the information; and

transmitting information associated with the

09126007.072998

information indicated by said identification code to said first information processing apparatus, depending on the judgement result made in said judgement step.

11. A transmission medium for transmitting a program to an information processing system including a first portable type information processing apparatus and a second information apparatus adapted to exchange information with said first information processing apparatus, wherein

said first information processing apparatus performs a process comprising the steps of:

capturing information;

storing the information captured in said capture step;

acquiring associated information on the basis of the information stored in said storage step; and

displaying the information acquired in said acquisition step; and

said second information processing apparatus performs a process comprising the steps of:

receiving information from said first information processing apparatus;

judging whether the information received in said reception step includes an identification code in a

09125007.072998

predetermined form associated with the information; and
transmitting information associated with the
information indicated by said identification code to said
first information processing apparatus, depending on the
judgement result made in said judgement step.
